CHAPTER V

CONCLUSIONS AND SUGGESTIONS

This chapter explains about the conclusion and suggestion of the research. Based on the result of the data analysis which have been done in Chapter IV, the conclusions are composed well. Furthermore, the suggestions are composed for the next researchers who are interested to make further research in analyzing clause complexes based on Functional Grammar.

5.1 Conclusions

Based on the analysis which has been done in Chapter IV, total data presented are 13 data in clause complexes. The analysis of the data focuses on analyzing the form of the taxis relation and meaning relations which occur in the taxis relation. These analyses describe about what types of the taxis relation are found in the clause complexes. Furthermore, these analyses also show what types of the logico-semantic relation are expressed in the taxis relation. As the result, in these business articles, the writer found 13 data which are divided into two types, expansion and projection. The expansion data consist of four clause complexes, five clause complexes, and six clause complexes. This type consists of nine clauses whereas the projection data consist of four clauses. These clause complexes consist of several taxis relation, parataxis and hypotaxis. After that, the writer also analyzes the logico-semantic relation in the taxis relation. The logico-semantic relation found in four clauses are four data and showed several

types in each data. Data 1, there are elaborating-extending-elaborating. Data 2, there are elaborating-elaborating-projection idea-enhancing. Data 3, there are enhancing-projection idea-enhancing. Data 4, there are extending-extending-extending-enhancing. Then, there are five clauses and showed enhancing-elaborating-elaborating in Data 5. Data 6, there are enhancing and elaborating. Data 7, there are elaborating-enhancing-elaborating-elaborating. Data 8, there are extending-extending-elaborating-elaborating. Those data represented Expansion. The last type in the logico-semantic relation, there is projection. The projection data found four data. Data 9, there is enhancing-extending-extending. Data 10, there is locution projection that was formed by the hypotaxis relation. Data 11, locution projection is formed by the parataxis relation. Data 12, locution projection-elaborating are formed of the hypotaxis relation. Data 13, idea projection-elaborating-ehancing-elaborating-extending are found of hypotaxis.

5.2 Suggestion

There are several suggestions based on the conclusions:

1. This research analyzes the clause complex based on the taxis relation and the logico-semantic relation. The writer expects that there are other researchers who are interested in analyzing the tone relation in the logico-semantic relation.
2. In addition, the other researchers can also analyze the clause complex based on other aspects of Functional Grammar, because the clause

complex can be analyzed using other meaning relations, such as clause as an exchange, clause as message, or clause as representation.
