CHAPTER V

CONCLUSIONS AND SUGGESTIONS

This chapter describes the conclusions based on the research question and the suggestion for the reader and the next researcher.

5.1 Conclusions

1. The elements of nominal ellipsis found in the data are deictic (Specific and Non-specific deictic), Cardinal Numerative, and Epithet. The elements of nominal ellipsis are found in words, phrases, and clause categories. For word class, there are 9 data (two data of specific deictic, three data of non specific deictic, three data of cardinal numerative, one repetition data from the cardinal numerative). Furthermore, for the categories of phrase, there are 16 data (five data of specific deictic: two data of non-specific deictic, three cardinal numerative data, one epithet data, and 6 data repetition of deictic and cardinal numerative). Last, in the type of clause, there are 16 data (Three data specific deictic, four data non-specific deictic and there are 9 data repetition of deictic). There are 41 data of nominal ellipsis element found in the movie script.

2. The syntactical units found in Iron Man movie script are words, phrases, and clauses. Every syntactical unit has its category. The word categories are noun, verb, preposition, and adjective. Furthermore, the phrase categories are noun phrase, verb phrase, prepositional phrase, and adjectival phrase. Last, the clause categories are dependent and independent clauses.

3. The meanings implied by the elliminated words, phrases and clauses depend on the meanings when the sentences are in complete forms. Ellipsis occurs to reduce the repetition of information that is previously mentioned. The showing of implied meaning serves to determine the structure of the sentence that are omitted. It also asserts the existence of an ellipsis in the data.

The different finding in this research with Herlita's (2006) research is the data analysis. The movie scripts (Iron Man 1 until 3) were analyzed in this research and Herlita's research analyzes a novel (Scarlet Letter). Thus, Herlita's research describes about the meaning of ellipsis (before the data are eliminated and after the data are eliminated) and this research has deeper discussion in nominal ellipsis. Thus, Nominal Ellipsis can be identified on the movie script conversation, especially in the three sequels of Iron Man Movie Script. The changes of structure and action can be affected by the presence and absence of nominal ellipsis. However, if nominal ellipsis occurs or not in the sentence, the

meaning of the conversation may be changes or not, it depends on the knowledge of the speakers.

5.2 Suggestions

This research delivers more knowledge to readers about nominal ellipsis. This research has not been able to explain in detail about nominal ellipsis in discourse analysis and conversation analysis. Based on the data obtained, there are some ambiguity of meaning that has not been described and analyzed. Therefore, there is an opportunity for next researchers to analyze that studies about discourse analysis in conversation and the ambiguity based on the data.
