CHAPTER V

CONCLUSIONS AND SUGESTIONS

In this chapter, it is concluded that there are some points from the previous chapter, Chapter IV. The points are also the important points from the analyzing data in discussing *not* and *no* construction. In addition, from discussing data about negative markers there are suggestions appeared for the next researcher in studying negative markers.

5.1 Conclusions

1. The *not* and *no* constructions are set in the simple, compound and complex sentences.
2. The negative markers *not* and no *are* exist in NP, VP, PP, AdvP, and to-infinitive P.
3. The relations *not* and *no* in each sentence are description relation in data (1), (2), (3), (4), and (14), identification relation in data (5), reason-RESULT relation in data (6), (7), (9), (10), (12) (13), (15), concession-CONTRAEXPECTATION relation in data (8), and condition-CONSEQUENCE relation in (11).
4. The existences of *not* and *no* also make some constructions, concept clusters and propositional clusters positive as in data, (1), (3),(5) and (14).

5.2 Suggestions

This research is focused on the negative markers *not* and *no* related. To provide to the study of negation, there are some other cases for further researcher. The existences of negative markers will be more complex, triple negative markers group in the one construction as in, *He does **not** have **no** reason to **dis**agree with the decision.* There are three negative markers exist in one construction, *not*, *no* and *disagree*. It will be interested in discussing the complexity negation for the next research.
