CHAPTER V

CONCLUSIONS AND SUGGESTIONS

This chapter illustrates the findings of the research, displays the answers to the research questions in Chapter I, and gives suggestions to other researchers who are interested in filling the gaps of this topic.

5.1 Conclusions

In this research, based on the data source, the writer has found 29 data that represent the analysis. Nineteen data have been analyzed in Chapter IV. Based on the findings and discussions, it can be concluded that:

1. Only three types of Parataxis Nominal Group Complex; Elaboration, Extension, and Enhancement appear in the Joseph O' Connor's short story "Figure in a Photograph". Projection did not appear in this research, because Projection is commonly used in direct speech. Therefore, the writer did not find the data of Projection.
2. Elaboration is the type that mostly used in this research, because in this short story, Elaboration is used to elaborate the characters or to elaborate the things. The function that is mostly used in the short story of this research is Complement, because Complement is used to give the information and

explain about the previous information that mostly appears in the Elaboration.

3. Based on the analysis of Logical Roles, all of the data have Head and Modifier, but in Data 10, the data only has Head without any modifier. It is because when the data is analyzed through Experiential Roles, Thing has two functions; as a Head Noun and the Things that modify the Head Noun. The existing of Thing is followed by the elements modifying the Thing. The elements modifying Thing can be pre-modifier and/or post-modifier. The modifiers are the prepositional phrases that have a function to separate the noun phrases.

5.2 Suggestions

Based on the conclusions, these are the suggestions for the next researchers who are interested to analyze the functional grammar analysis, especially in Nominal Group:

1. This research only focuses on Nominal Group, for the next researchers may discuss about the others group, such as verbal group, adverbial group, conjunction group, or prepositional group.
2. This research only focuses on Parataxis Nominal Group, for the next researchers may discuss about Hypotaxis Nominal Group.
3. One of the types of Parataxis Nominal Group Complex; Projection did not found in this research. The next researchers may analyze about Projection Parataxis Nominal Group.
